Style Guide - Social Stock

General
- No unused imports

Indentation and Spacing
- 2 spaces indentation
- The maximum line length is 80 characters
- No leading spaces

Comments
- Pre-function
  - Description
  - Input
  - Output
- Small description for conditionals
- Do not mix unquoted key with quoted keys

Naming
- Give a descriptive name that describes the intention of the variable or function.
- Do not use abbreviations that may cause confusion to someone outside the project.
- Camel Case naming format
- Uppercase for constants.

Punctuation
- Frontend
  - Use single quotation marks only.

Strings
- Use an f-string, the % operator, or the format method for formatting strings.
- Avoid using the + and += operators to accumulate a string within a loop.
- Be consistent with your choice of string quote character within a file.
- Prefer """ for multi-line strings rather than '".
- Multi-line strings do not flow with the indentation of the rest of the program.

Error Messages
- The message needs to precisely match the actual error condition.
- Interpolated pieces need to always be clearly identifiable as such.

- They should allow simple automated processing (e.g. grepping).
